KUNAL KASHYAP

Kunalkash50@gmail.com | +91-9958334257 | LinkedIn | GitHub | Kaggle

PROFESSIONAL SUMMARY

Results-driven Data Scientist specializing in production-grade ML systems and healthcare analytics. Experienced in architecting end-to-end solutions from data validation to deployment, with proven success in time series forecasting, deep learning pipelines, and RESTful API development. Passionate about transforming complex datasets into actionable insights through advanced statistical modeling and interactive dashboards.

EDUCATION

Bachelor of Arts (Hons) English 2025

Delhi University, New Delhi, India

Senior Secondary (CBSE) – 88% 2021

TECHNICAL SKILLS

- **Languages & Frameworks:** Python, TensorFlow, Keras, PyTorch, Scikit-learn, FastAPI, LangChain, Streamlit
- **AI/ML Specializations:** Deep Learning (CNN, ANN), NLP, Computer Vision, Generative AI, Time Series (ARIMA), Chatbots
- **Data Science:** NumPy, Pandas, EDA, Matplotlib, Seaborn, Plotly, Feature Engineering, Statistical Analysis
- **Tools & DevOps:** Docker, Git, Jupyter Notebook, VS Code, Render, LightGBM

PROFESSIONAL EXPERIENCE

Machine Learning Intern Jan 2026 – Apr 2026

Unified Mentor Pvt. Ltd., India

- Developing machine learning models for real-world business applications with focus on predictive analytics
- Building data pipelines and implementing ML algorithms for classification and regression tasks

Data Science Intern Nov 2025 – Jan 2026

InLightnX Global Pvt. Ltd., India

- Developed and deployed ML models using Python, TensorFlow, and FastAPI for business automation
- Applied NLP and deep learning techniques for predictive modeling with comprehensive EDA workflows

PROJECTS

System Capacity & Care Load Analytics | Python, ARIMA, Streamlit, Plotly | GitHub

- Built analytics framework for healthcare facility capacity monitoring with ARIMA time series forecasting
- Developed Streamlit dashboard with KPI cards and Plotly visualizations for real-time operational insights

Heart Disease Prediction System | Python, Machine Learning, FastAPI | Live Demo

- Built ML model for chronic heart disease prediction with feature engineering and deployed via FastAPI on Render

Loan Repayment Prediction | Python, LightGBM, FastAPI, Docker | Live Demo

- Designed LightGBM-based prediction model with RESTful API and containerized using Docker for scalability

Iris Flower Classification | ANN, Keras, FastAPI | Live Demo

- Built Artificial Neural Network for multi-class classification and deployed as production API with validation

ADDITIONAL INFORMATION

Languages: English (Fluent), Hindi (Native) | **Certifications:** Generative AI & NLP Training | **Interests:** Open Source, AI Research
